Make sure your Azure CLI version is 2.0.21 or later. To see which version you have, run `az --version` command in your terminal window.

Deploy the uploaded ZIP file to your web app by using the az webapp deployment source config-zip command.

The following example deploys the ZIP file you uploaded. When using a local installation of Azure CLI, specify the path to your local ZIP file for `--src`.

Azure CLI | Copy | Try It

```
az webapp deployment source config-zip --resource-group myResouceGroup --name <app_name>
```

This command deploys the files and directories from the ZIP file to your default App Service application folder (`\home\site\wwwroot`) and restarts the app. If any additional custom build process is configured, it is run as well. For more information, see Kudu documentation.

Deploy ZIP file with REST APIs

You can use the deployment service REST APIs to deploy the .zip file to your app in Azure. To deploy, send a POST request to https://<app_name>.scm.azurewebsites.net/api/zipdeploy. The POST request must contain the .zip file in the message body. The deployment credentia
